Paper No(s)/Mail Date 6)							

## **DETAILED ACTION**

Claims 1-26 are pending in the instant application.

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Applicants are required to elect a single modulator (i.e. a single inhibitor or agonist) from claims 4, 5, 9, 12, 13 and/or 24.

The inventions are distinct, each from the other because of the following reasons:

The different inventions drawn to different eNOS modulators (agonists or inhibitors) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different and distinct modulators, and methods comprising them are biologically, structurally and functionally different and distinct from each other. The methods involving the use of a distinct effector molecule utilize a different and distinct composition, and utilize distinct methods steps from each other. For these reasons, the inventions of these different Groups are patentably distinct.

Furthermore, searching the inventions of Groups comprising all of the different modulators, and the methods comprising them together would impose a serious search burden. In the instant case, the search of the distinct methods and compositions are

Art Unit: 1635

not coextensive. There is a search burden also in the non-patent literature. Prior to the concomitant construction and utilization of the different modulators of interest there may be journal articles devoted solely to one Group or effector molecule that would not have described the compositions and methods of the other Group. Searching, therefore is not coextensive. As such, it would be burdensome to search the inventions of the different Groups together.

Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the methods comprising use of these modulators are unrelated as they comprise distinct steps and utilize different effector molecules which demonstrates that each method has a different mode of operation. The methodology and materials necessary for each of these distinct methods differ significantly, and each Group constitutes a biologically, chemically and functionally distinct and different composition and method and therefore each involves a patentably distinct invention. Therefore, each method is divergent in materials and steps. For these reasons the inventions of these different Groups are patentably distinct.

Pursuant to 35 U.S.C. 121 and 37 C.F.R. 1.141, the different modulators listed in claims 4, 5, 9, 12, 13 and 24, and encompassed by claims 1-26 are subject to restriction. In the instant case, one independent and distinct nucleic acid sequence will be examined in a single application without restriction.

Application/Control Number: 10/629,928

Art Unit: 1635

Claims 1, 10 and 20 link(s) the different inventions comprising distinct nucleic acid constructs. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claims 1, 10 and 20. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application.

Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Page 5

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Conclusion

Certain papers related to this application may be submitted to Art Unit 1635 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. 1.6(d)). The official fax telephone number for the Group is 571-273-8300. NOTE: If Applicant *does* submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Jane Zara** whose telephone number is **(571) 272-0765**. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang, can be reached on (571) 272-0811. Any inquiry regarding this application should be directed to the patent analyst, Katrina Turner, whose telephone number is (571) 272-0564. Any inquiry of a general nature or relating to the

Application/Control Number: 10/629,928

Art Unit: 1635

status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0196.
